

FreshMarx Labels Have a Variety of Adhesive Types

What adhesive is right for you?

- What surface will the label be adhered to
 - Re-usable or discarded containers
 - Stainless steel baking pans
- What environments do the labels need to withstand—cold, heat, low or no moisture
- Ease of label removal—permanent or concerns with residue build-up on containers

How the label is used will determine the adhesive.

FREEZX® for labels that will not fall off containers resulting in mix-ups with food prep dates and contents.

FREEZX® Labels—freezer safe. Permanent adhesive that is difficult to remove. Ideal for use on disposable containers, portion bags or disposable boxes.

DURAX® ensure your date code labels won't peel or dissolve when switched between various temperatures.

DURAX® Labels—water and tear resistant, works well in cold or warm temperatures. Ideal for use when labels are exposed to wet or moist environments.

REMOVX® ideal where there is difficulty with residue build-up on containers—a potential for cross contamination.

REMOVX® Labels—stick securely yet are easily removed with minimal or no residue adhesives. They should not be used in moist environments.

DISSOLVX® eliminates time-consuming label removal before pans can be washed and re-used.

DISSOLVX® Labels—perform in both cold and warm environments on a variety of containers. Residue free—ideal for dish washable backing pans. Labels will completely disintegrate within 30 seconds when submerged in any temperature water. Not suited for high moisture areas.

Labels	Minimum Application Temperature	Working Temperature Range	Easy To Remove	Moisture Resistant	Apply To Frozen Goods	Safe For Freezer	Adhesive Description
FREEZX®	-10° F	-65° F to 200° F	U	S	E	E	Adhesive is ideal for use on disposable boxes, containers, portion bags, etc.
REMOVX®	32° F	-65° F to 200° F	E	S	S	S	Removes cleanly from most surfaces. Labels should be removed before washing to avoid adhesive buildup.
REMOVXTRA®	32° F	-65° F to 200° F	E	S	S	S	Removable adhesive with a "lift-tab".
DURAX®	32° F	-65° F to 200° F	E	E	S	S	Durable water and moisture resistant material with removable adhesive that can survive washing and still retain removability.
DISSOLVX®	21° F	-40° F to 176° F	E	S	S	S	Label and adhesive dissolves away in water. For use on reusable containers. Areas of high moisture and steam should be avoided.
